Summary

My name is Vinicius, I am 17 years old, and I was born in Teodoro Sampaio (São Paulo). I began to develop an interest in programming at the age of 13 when I created a server for the game Minecraft. That was my first encounter with the Java language, and I started exploring the Bukkit API (Plugins). However, during the pandemic, I had limited access to technology until I was 16, when I decided to start a Java course on YouTube (BroCode). I am proficient in English, with good comprehension and grammar.

I started pursuing a programming career 4 months ago (March 2024) with C#, and since then, I have been studying hard to achieve my dream of becoming a good developer and contributing to the development of major applications.

I enjoy learning, am self-taught, and always seek solutions when necessary on sites like StackOverflow and Reddit, or by using AI tools like GitHub Copilot or ChatGPT. I aim to gain experience, develop new skills when necessary, and participate in projects with others, where I will have good communication and teamwork.

Education

E.E Arthur Ribeiro

January 2024 - Present

General

High School - 3th Grade

Projects

m4Installers

July 2024 - Present

A simple console application that helps downloading essential software to your PC.
